

NEXT HORIZON · PLATFORM OVERVIEW

Ship. Comply. Analyze. Save.

One European logistics platform that consolidates what most growing brands currently assemble from five separate tools: negotiated carrier rates, real-time supervision, surcharge audit and an ESPR-ready Digital Product Passport. Subscription starts at **€119 per month** for SMBs.

What the platform replaces

Shipping label tools, carrier portals, tracking aggregators, surcharge audit services and DPP point solutions, all under one contract. No forced migration, you plug in on top of what you already run.

Three modules, one contract

Module 01 - Operations and automations - From €119/mo

Full access to Control Tower, AI Logistics Analyst, Visualizer, Movement Intelligence, Orders, Carriers, E-commerce, Billing and Settings. Includes the supervised operational agents (carrier selection, surcharge audit, invoice reconciliation, claims, exception resolution).

Module 02 - Carrier rates - On request

Carrier rates under direct contract, built into your label. The unit cost decreases with your monthly volume. Express, postal and forwarder networks covered across EU-27. You stay the principal.

Module 03 - Digital Product Passport - On request

Item-by-item serialisation (SGTIN) and DPP generated automatically at every logistics event. Three sub-tiers: DPP Essentials, DPP Active, DPP Enterprise. Built against W3C CE-DPP, ISO/IEC 15459 and EPCIS.

Why brands move to Next Horizon

- **Five tools become one.** Shipping platform, negotiated rates, invoice audit, returns portal and DPP, all under one contract.
- **Supervised agents.** The agents propose actions, your team decides above a threshold you set.
- **ESPR is included.** The Digital Product Passport is generated from data the platform already observes, so no second project and no second vendor.
- **European by construction.** EU-hosted, GDPR by design, EU governing law. Participant in CIRPASS-2 and the W3C CE-DPP Community Group.

- **Per-label and DPP pricing.** Confirmed at a 30-minute scoping call, based on your actual volumes.

WHAT HAPPENS NEXT

Four steps to a live operation.

Activation is calibrated to your operation. There is no migration mandate. You stay on your current systems and Next Horizon plugs in on top.

01 - Scoping call (30 minutes)

A read of your top lanes, your current carrier setup, your e-commerce stack, your ESPR sector and your volumes. Output: a confirmed pricing range and a sequenced activation plan.

02 - Connection

Connect your Shopify, WooCommerce or PrestaShop store via OAuth. Connect your existing carrier accounts. Optionally activate the carrier rates we make available, lane by lane.

03 - First label

A real shipment, generated from a real order, routed by the carrier selection agent. Every step is traced. You stay the principal on the transport contract.

04 - Supervised operation

Daily operations run through the Control Tower. The AI Logistics Analyst answers natural-language questions grounded in your real data, cites its sources and proposes next steps. Surcharge audit and invoice reconciliation run continuously in the background.

Standards and programs

Participant in **CIRPASS-2**, the European Digital Product Passport pilot co-funded by the European Commission. Member of the **W3C CE-DPP Community Group**. NVIDIA Inception alumna. Hosted entirely in the European Union, GDPR by design, EU governing law.

Start with Next Horizon

Set up your account and confirm your scope at horizonlogistics.eu/get-started. Already running on Shopify or WooCommerce? Connect your store at horizonlogistics.pro to start syncing orders and shipments. Prefer email? Reply to the message that came with this report and we will reach back.
